

System: Simple E-Commerce Backend

Purpose: Track customers, staff, products, and purchases for a small online store.

User roles:

- Staff — add/edit products, manage inventory (stock quantity, price)
- Customer — browse products, make purchases

Functional requirements:

1. System stores customer contact info (name, email)
2. System stores staff info (name, role)
3. System stores product catalog (name, price, stock quantity)
4. System records purchases: which customer bought which product, quantity, date
5. Staff can add new products and update stock
6. Customers can view available products
7. System can report which customers purchased which products (and filter by price)

Out of scope: payments/credit cards, shipping, returns, reviews (kept out to stay within individual-project scope)
